

## SNG, VSAT applications and BEACON

*The RANGER Neo Lite field strength meter includes a brand new spectrum analyser function that makes it easy for technicians working in SNG vans and field VSAT applications to set up their satellite transmission-reception systems.*

■ Although this field strength meter has different no-error satellite identification functions, technicians working with these systems are often requested by the satellite operators to search for the “Beacon” signal as a mean of satellite identification.

This requires high resolution, high sensitivity and fast sweep times which are all readily available in the RANGER Neo field strength meters.
